Figure 2.34: A 2x2 grid of plots showing the evolution of the system over time. The top row shows the evolution of the system for different initial conditions, and the bottom row shows the evolution of the system for different parameters. The plots are arranged in a grid, with the top row showing the evolution of the system for different initial conditions and the bottom row showing the evolution of the system for different parameters. The plots are arranged in a grid, with the top row showing the evolution of the system for different initial conditions and the bottom row showing the evolution of the system for different parameters.

Figure 2.35: A plot showing the evolution of the system over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time.

Figure 2.36: A plot showing the evolution of the system over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time.

Figure 2.37: A plot showing the evolution of the system over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time. The plot is a 2D plot with time on the x-axis and a variable on the y-axis. The plot shows a single curve that starts at a certain value and evolves over time.
